

Veiled Voice Sound Masking System

Veiled Voice Sound Masking System

The pre-engineered and modular **Veiled Voice™ Sound Masking System** is the most efficient electronic sound masking system available. Each 8" high speaker covers up to 250 sq. ft. but uses less than one watt of power. The speakers are installed above the drop ceiling in office environments and wired directly to the master control box. Installed and introduced properly, sound masking is a comfortable addition to the environment by making speech patterns unintelligible to people in the immediate and general area.

The Veiled Voice™ Sound Masking System emits soundwaves which condition the human ear to reject unwanted speech noise. One master unit can control independent zones of up to 4,000 sq. ft.. Engineered systems consisting of multiple masters are available for areas larger than 4,000 sq. ft.. Volume levels on the speakers can be adjusted individually for each area depending upon the level of speech privacy required. The Veiled Voice™ Sound Masking System is easily installed and requires little, if any, maintenance.

Note: Speaker coverage might vary with plenum height, partition height and / or fire wall construction. Consult with the factory for speaker location.
